Traveling to some countries in Europe, you may be surprised at the food that has become popular these days. Take a close look at what you eat; you might be eating bugs! More and more countries in Europe and America are trying to make insects a part of their diet. For some countries, eating insects has been in their food culture for a long time. If you don't eat insects, you may have to do so soon.

Scientists have said that eating insects may be the best way to save the population. There will be more than 9 billion people in the world by 2050. We won't have enough food for everyone by then if we keep producing food the way that we do now. Insects are easy to be raised and are rich in protein. What's more, they're eco-friendly. Insects need less food and water than cows, but they have more protein. That means you use the same water and food, but you get a lot more protein from insects. Also, they give out less gas than cows do. They may be an important food in the future.

For most people who have never eaten insects, it may be hard to take a bite of the bugs on their plates. So, cooks are trying hard to make insects look delicious. For example, they make insects into burgers and meatballs. Give them a try. You'll love it!
